NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Amounts in thousands, except share and per share amounts)

In June 2012, the Company adopted, with shareholder approval, the 2012 Stock Option Plan (the “2012 Plan”). The 2012 Plan provides for the granting of incentive stock options or nonqualified stock options to directors, officers, employees or vendors of the Company. Under the 2012 Plan, 15,000,000 shares of common stock are reserved for issuance. Incentive stock options and nonqualified options have terms which are determined by the Committee, with exercise prices not less than the market value of the shares on the date of grant. The options generally expire five to ten years from the date of grant and are exercisable based upon graduated vesting schedules as determined by the Committee.

Weighted average years remaining term	1.8	2.0	2.0
Aggregate intrinsic value	\$ 181	\$ 181	\$ 181

The following table details the weighted-average grant-date fair values and the assumptions used for estimating the fair values of the Company's options at the dates of grant using a Black-Scholes option pricing model:

	Six months ended June 30,	
	2017	2016
Weighted-average per share grant-date fair value	\$0.151	\$0.174
Expected term (years)	5	5
Risk-free interest rate	1.83%	1.23%
Volatility	43.47%	49.44%
Dividend yield	0%	0%
Forfeiture rate	0%	0%

Expected term - The Company's expected term is based on the period the options are expected to remain outstanding. The Company estimated this amount based on historical experience of similar awards, giving consideration to the contractual terms of the awards, vesting requirements and expectations of future behavior.

Risk-free interest rate - The Company uses the risk-free interest rate of a U.S. Treasury Note with a similar term on the date of the grant.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

June 30, 2017 and 2016

(Amounts in thousands, except share and per share amounts)

Volatility - The Company calculates the volatility of the stock price based on historical value and corresponding volatility of the Company's stock price over the prior five years.

Dividend yield - The Company uses a 0% expected dividend yield, as the Company does not have a history of paying dividends and does not anticipate declaring dividends in the near future.

The Black-Scholes option valuation model was developed for use in estimating the fair value of traded options which have no vesting restrictions and are fully transferable. In addition, option valuation models require the input of highly subjective assumptions including the expected stock price volatility. Because the Company's employee stock options have characteristics significantly different from those of traded options, and because changes in the subjective input assumptions can materially affect the fair value estimate, in management's opinion, the existing models do not necessarily provide a reliable single measure of the fair value of its employee stock options.

NOTE 13 – SUBSEQUENT EVENTS

The Company evaluated its June 30, 2017 financial statements for subsequent events through August 9, 2017, the date the financial statements were available to be issued. The Company is not aware of any subsequent events which would require recognition or disclosure in the consolidated financial statements.
